Fold point A underneath along dashed fold line so it touches point C.

Fold point B on top along dashed fold line so it also touches poit C.

Cut a slit through both sides of one end of a plastic straw. Make the slit about 1 inch long.

Slip point C of the Whirly-Twirly into the slit in the straw. Allow points A and B to remain free. They are the Whirly-Twirly's wings. Tape the paper to the straw.

Give the Whirly-Twirly a light toss into the air. It will come down spinning rapidly.
