CALL FOR PAPERS

The Vertical Flight Society (VFS) Annual Forum & Technology Display is the world’s leading international technical event on vertical flight. The Forum is the premier opportunity to present and discuss advances in vertical flight technology, design and its applications.

Founded in 1943 as the American Helicopter Society (AHS), the Vertical Flight Society is pleased to announce that this year’s Forum is our Diamond Jubilee. The 75th Annual Forum & Technology Display takes place May 13-16, 2019, at the Pennsylvania Convention Center in Philadelphia, Pennsylvania, where the first Annual Forum was held in 1945. For 75 years, the Forum has been the world’s largest and most important vertical flight technical meeting. It is the only venue where academics, government leaders and researchers, military decision makers, and industry engineers and leaders come together to learn, share and work to advance vertical flight. We invite the world’s vertical flight community to join us in Philadelphia as we celebrate this milestone event and support the advancement of The Future of Vertical Flight.

Vertical takeoff and landing (VTOL) technology is advancing rapidly, as autonomy, additive manufacturing, all electric/ hybrid-electric propulsion approaches and other technologies and innovations enable new capabilities for VTOL aircraft. While the US military’s Future Vertical Lift (FVL) program progresses and expands, next generation civil tiltrotors and compounds are taking shape under Europe’s Clean Sky 2, new commercial helicopters near certification and more electric VTOL aircraft take to the skies. This coming year will be full of progresses and expands, next generation civil tiltrotors and compounds are taking shape under Europe’s Clean Sky 2, new commercial helicopters near certification and more electric VTOL aircraft take to the skies. This coming year will be full of progress and expand, next generation civil tiltrotors and compounds are taking shape under Europe’s Clean Sky 2, new commercial helicopters near certification and more electric VTOL aircraft take to the skies.

This Call for Papers invites abstracts to be submitted for consideration in any of the technical areas sponsored by the Society’s 21 technical committees:

- Acoustics
- Advanced Vertical Flight
- Aerodynamics
- Aircraft Design
- Avionics & Systems
- Crash Safety
- Crew Stations & Human Factors
- Dynamics
- Handling Qualities
- History
- HUMS/CBM
- Manufacturing Technology
- Modeling and Simulation
- Operations
- Product Support Systems Technology
- Propulsion
- Safety
- Structures & Materials
- Systems Engineering
- Test & Evaluation
- Unmanned VTOL

Papers on electric VTOL technologies can be submitted to respective committees.

The Forum Technical Chair for this event is Luigi Ricci Moretti, Piasecki Aircraft, luigirm@piasecki.com. The Forum Deputy Technical Chair is Dr. Anubhav Datta, University of Maryland, datta@umd.edu.

Abstracts are due by Monday, October 29, 2018 and must be submitted to the Mira website at www.vtol.org/mira. The recommended deadline to obtain clearances from your organization(s) is at least one-week prior, October 21, 2018.

Forum 75 is an international event and all papers and presentations must be completely unrestricted. It is the author’s responsibility to obtain clearances for their abstracts and papers in time to meet all submission deadlines.

- **Abstracts should not exceed 5-pages and must be submitted in PDF format.**
- Formatting guidelines and templates are available on the Mira and Forum 75 sites.
- The abstract should present the status of the background data to be used, summarize figures and illustrations, and include a summary of important conclusions.

**Abstract acceptance will be based upon the following:**

- Abstracts should report significant information and will be judged on technical quality, relevance, importance and timeliness.
- Submitter’s prior history in following through with previous commitments.
- Papers presented previously are not eligible for consideration.
- One author may present no more than two papers at Forum 75.

**IMPORTANT DATES**

- **Monday, October 15, 2018** – abstracts must be submitted to Mira website.
- **Mid-November 2018** – VFS expects to notify authors of paper selection.
- **Monday, April 1, 2019** – final papers must be submitted to Mira website.

Forum 75 Call for Papers information, contact Julie M. Gibbs: 1-703-684-6777 ext. 103, jmgibbs@vtol.org

Forum 75 Exhibit and Sponsorship information, contact David Renzi: 1-703-684-6777 ext. 105, drenzi@vtol.org

www.vtol.org/forum
No Paper — No Podium Rule
Submittal of an abstract is a professional commitment: if the abstract is accepted, the author commits to prepare a final paper, attend the Forum and make a presentation based on that final paper.

The “No Paper – No Podium” policy applies to all papers and all technical sessions. Authors who do not submit their paper by the time the technical schedule is finalized will not be scheduled to speak.

Late Paper Submissions
Final papers received after the final submission deadline date are not eligible for a Best Paper Award and may not be included in the Proceedings.

Alfred Gessow Forum Best Paper Award
Each of the authors of the best paper presented at the Annual Forum for each technical discipline — as determined by the Committee Chairs, Session Chairs and the Technical Council — will receive a Best Technical Paper Award certificate. The overall best paper will receive the Alfred Gessow Forum Best Paper Award. One of the winning authors will be invited to present his or her paper at the European Rotorcraft Forum (ERF), to be held in September 2023. The ERF organizers provide complimentary registration and accommodations and VFS covers the winner’s travel expenses to ERF.

Registration
Presenters of all papers to be delivered at technical sessions, must register and are eligible for reduced Forum speaker registration fees. More information is available at www.vtol.org/forum.

ANNUAL FORUM TECHNICAL SESSIONS

ACOUSTICS
[Abstracts exceeding the 5-page limit will not be evaluated.]

Papers addressing recent advancements in the study of external and internal noise generation, propagation, and control (active and passive) for rotorcraft and other Vertical Take Off and Landing (VTOL) — including Unmanned Aerial Vehicles (UAV) and Urban Air Mobility (UAM) vehicles.

Appropriate external noise topics include:
• vehicle component and full system noise prediction methodology development and validation;
• wind tunnel and full-scale flight test acoustics measurements;
• new procedures for acoustic data acquisition or analysis

Appropriate interior noise topics include:
• application of numerical techniques to predict noise in vehicle cabins;
• active and passive noise control technologies to reduce cabin noise

Additional topics of interest include, but are not limited to:
• research contributing to a basic understanding of fundamental aerodynamic noise sources, such as rotor harmonic noise, impulsive noise and broadband noise, as well as interaction between various noise sources for rotorcraft, VTOL UAVs and VTOL UAM vehicles.

Session Chair: Dr. Daniel Shannon, United Technologies Research Center, 1-860-610-7673, shannodw@utrc.utc.com

ADVANCED VERTICAL FLIGHT
Papers are sought that focus on novel and innovative configurations as well as transformative technologies for vertical flight vehicles. Papers on technology advances in unconventional vehicles are encouraged, including, but not limited to:
• tiltrrotors and tiltwings
• ornithopters
• cycloidal rotor aircraft
• thrust/lift compound aircraft
• slowed/stopped rotor aircraft

Also welcome are papers addressing such research areas as:
• urban mobility/eVTOL vertical lift concepts
• novel air vehicle configurations
• distributed electric propulsion
• hybrid propulsion aircraft and/or all-electric aircraft
• new propulsion systems for power/ energy management
• aerodynamic enhancements
• structural efficiency improvements
• flight control systems
• autonomy
• distributed electric propulsion
• multi-rotor/lift-propulsion systems

Session Chair: Dr. Jayant Sirohi, University of Texas at Austin, 1-512-471-4186, jayant.sirohi@mail.utexas.edu

AERODYNAMICS
[Abstracts exceeding the 5-page limit will not be evaluated.]

High-quality papers are invited that address recent accomplishments in all areas of rotorcraft and vertical and/or short take-off and landing (V/STOL) aerodynamics, especially as related to the future of vertical flight. Topics of interest include, but are not limited to the following:
• computational fluid dynamics techniques
• analytical methodologies
• experimental aerodynamics and/or flight test results
• flow visualization methods, correlation
• aerodynamic design methods

Session Chair: Dr. Juergen Rauleder, Technical University Munich, +49-89-289-16303, juergen.rauleder@tum.de
Deputy Session Chair: Arnaud Le Pape, ONERA, +33-14-673-4353, arnaud.lepape@onera.fr

AIRCRAFT DESIGN
Papers are invited on the design of manned and unmanned air platforms, systems and components. Papers discussing the interaction of technology, configuration, and requirements in the design of next generation civil and military rotorcraft are also sought. Specific topics of interest include:
• conceptual design of whole platforms and systems
• preliminary and detail design of vehicle, airframe, dynamic components and major subsystems
• integration of novel propulsion, control effectors and modular payloads/weapon

Session Chair: Michael Avera, U.S. Army Research Lab, 1-410-278-8977, michael.p.averaciv@mail.mil
Deputy Session Chair: Michael Strauss, Sikorsky Aircraft, a Lockheed Martin Co., 1-203-386-4395, michael.strauss@lmco.com
**AVIONICS & SYSTEMS**

The committee invites papers that address mission, flight, or avionics systems for manned, unmanned, or optionally manned vertical flight aircraft. Potential topics can include but are not limited to the following:

- aspects of mission, flight, or avionics management systems including hardware, firmware, and software design, testing, development, fielding/deployment, or success/ failures/challenges/lessons learned
- integration of net centric operations, sights and sensors, weapons and armament, navigation and communications, aircraft survivability, aircraft management, controls and displays, data management (concentration or collection), or electronic warfare systems
- open systems architecture initiatives, technologies, and applications within rotorcraft or adjacent airborne aircraft (e.g., fighter) systems, including, but not limited to FACE™, OMS, HOST, and IMA architectures
- complex software-intensive, partitioned, or multi-core systems

**Session Chair: Joe Franiak**, Northrop Grumman Company, 1-818-519-1701, joe.franiak@ngc.com

**Deputy Session Chair: Harold Tiedemann**, Rockwell Collins, 1-319-295-0424, harold.tiedemann@rockwellcollins.com

**CRASH SAFETY**

Papers invited on ALL aspects of crashworthiness and aviation occupant safety relating to rotorcraft, UAVs, and other V/STOL aircraft in applications such as military, civil, offshore transport, mountainous terrain, emergency medical services, and law enforcement. Of key interest are system integration analyses that demonstrate enhanced occupant safety. Emphasis will be given to the recent development of new crash safety concepts and technologies focused on:

- minimizing human impact injury
- maximizing post-crash survival
- development of new crash-resistant design criteria
- development and application of improved and more comprehensive human tolerance and injury criteria

Additional crashworthiness topics of interest include but are not limited to the following:

- advances in energy absorbing systems such as landing gear
- composite airframe structures, seats, cargo and mass item retention systems, and internal/external inflatable devices crew, troop, and passenger restraint systems
- water ditching and post-impact flotation stability
- crashworthy fuel systems to include range extension tanks
- testing and validation; and methods of mishap data retrieval, collection and analysis use of mishap data to define crash safety technology deficiencies and support system safety analyses
- analytical simulation of aircraft crash impacts on rigid, massively sloped (mountainous)
- soil and water impact surfaces
- bird strikes against the canopy and rotor systems
- impact of crash-resistant fuel systems
- occupant modeling, and simulation of aircraft crash protective systems such as landing gear, energy-absorbing seats, and inflatable devices
- validation of analytical methods that will improve the reliability, accuracy, and scope of computer simulations for crash safety
- numerical techniques for crashworthiness optimization
- to reduce aircraft weight while improving crash safety performance

**Session Chair: Dr. Joseph Pellettiere**, Federal Aviation Administration, 1-937-822-1073, joseph.pellettiere@faa.gov

**Deputy Session Chair: Dr. Akif Bolukbasi**, Boeing Company, 1-480-891-5111, akif.o.bolukbasi@boeing.com

**CREW STATIONS & HUMAN FACTORS**

Papers are invited for all aspects of air vehicle crew stations and/or human factors engineering. Areas of interest include but are not limited to the following:

- new designs facilitating hands-on/eyes-out operations
- improved seat comfort and safety, facilitating longer missions
- flight controls that reduce workload or simplify the pilotage task
- Innovative flight control and/or mission grip design
- cognitive decision aiding and automation
- Improved situation awareness and information management techniques
- new and innovative visual displays, large area displays, touch interfaces, 3-D displays
- graphical user interface designs and information management
- tactile cueing and tactile displays
- voice recognition and auditory displays, advances in 3-D audio
- secure and night vision goggle-compatible crew station lighting
- unmanned air system ground station human-machine interface designs
- workload, stress and fatigue assessment, and impact on crew performance
- human-machine interface design for maintainers
- cost control approaches including design processes, test methodologies, and integration of off-the-shelf technologies

**Session Chair: Andrew P. Smith**, Boeing Company, 1-480-239-4984; rootchord@gmail.com

**Deputy Session Chair: Dr. Karen Feigh**, Georgia Institute of Technology, 1-404-385-768, karen.feigh@gatech.edu

**DYNAMICS**

Papers are invited for all areas related to rotorcraft dynamics and aeroelasticity. Priority will be given to completed programs where significant conclusions are substantiated and the results contribute to advancing the state-of-the-art. Papers reporting on the following are of particular interest:

- development of rotorcraft dynamic or aeroelastic analyses, experimental validation and new experimental results
- advances in dynamics technology and design methodologies
- dynamic aspects of technologies such as active controls, adaptive rotors, UAV/MAVs, eVTOL, and unconventional V/STOL aircraft

Other topics include but are not limited to:

- rotor response and stability
- dynamics of coupled rotor/airframe systems
- load prediction
- vibration reduction
- analytic modeling techniques
- experimental measurements as well as computational fluid structure interaction and reduced order models

**Session Chair: Dr. Paul Cranga**, AIRBUS, +1-33-442-85-7673, paul.cranga@airbus.com

**Deputy Session Chair: Dr. Ed Smith**, Pennsylvania State University, 1-814-863-0966, ecs5@psu.edu
Papers are invited that address all aspects of vertical flight aircraft handling qualities from basic research through engineering design and development to verification, qualification, and certification in piloted simulation and flight tests. Handling Qualities comprise all of the aircraft characteristics that govern the ease and precision with which a pilot is able to perform tasks required by various aircraft missions. This includes vehicle stability and control/response characteristics, guidance and control systems, and the pilot-vehicle interface. There is also particular interest to investigate and expound on the import and influence these systems have on piloting strategies and pilot workload as driven by task demands. Papers are encouraged that address significant results from:

• research, development, and design of advanced systems and approaches/means to improve handling qualities with respect to operational needs and experience
• the impact of handling qualities on safety considerations, and work related to handling qualities of unconventional vertical flight configurations
• handling qualities of remotely-piloted, unmanned, and autonomous systems as defined by mission performance measures, or other relevant metrics.

Session Chair: Dr. Carlos Malpica, NASA Ames Research Center, 1-650-604-1663, carlos.a.malpica@nasa.gov
Deputy Session Chair: Matthew Rhinehart, U.S. Navy, 1-301-342-0418, matthew.rhinehart@navy.mil

Papers are invited on the following topics within the area of rotocraft health and usage monitoring and management, and condition based maintenance, as they support total lifecycle value (sustainment, operational availability, etc.) of manned and unmanned rotocraft platforms:

• Advanced monitoring technologies to support aircraft health and condition assessment, including sensors, data acquisition and processing, diagnostic and prognostic algorithms, data analytics/mining, onboard system architecture with HUMS integration, wireless communication and energy harvesting
• Advanced life and usage assessment techniques, including modeling, analysis, and data fusion
• Paradigm shifts in aircraft design, maintenance practices, and operations planning (logistics), enabled through HUMS (e.g., Ultra-Reliable Design and Maintenance-Free Operation Periods)
• Aircraft (onboard and ground (offboard) decision support system/tools implementation including verification, validation, and certification/qulification including HUMS-related cyber security
• Success stories including improvements in operational availability, safety, costs, and maintenance benefits
• The application areas are propulsion, drive systems, structures, rotor systems, vehicle management system/flight control, electrical and electronic systems, as well as cross-system integrated solutions.

Session Chair: Catherine Cheung, National Research Council, 1-613-998-1541, cathy.cheung@nrc-cnrc.gc.ca
Deputy Session Chair: Christopher Lyman, U.S. Army Aviation Development Directorate, 1-757-878-5518, christopher.d.lyman2.civ@mail.mil

The Modeling and Simulation technical committee seeks papers on the application of modeling and simulation to the Future of Vertical Lift, VTOL aircrew flight training & rehearsal, flight operations, design, and safety and certification requirements. Papers on the following topics are invited:

• improving VTOL safety and operations quality assurance through flight simulation
• rigorous quantification of benefits and Return on Investment of flight modeling and simulation for design, flight-testing, training, and other activities compared to traditional practices
• application of M&S to improve design, flight test, and certification; and to support virtual engineering lifecycle concepts for VTOL aircraft, especially rotorcraft
• specialized topics in physics-based modeling, system identification, model-based control architecture, and simulation/simulator verification and validation with respect to ADS-33E-PRF, 14 CFR Part 60, CS-FSTD(H) or similar standards
• flight modeling and simulation of sling loads, urban mobility, alpine operations, shipboard launch and recovery, Degraded Visual Environments, and other unique operational challenges
• application of flight modeling and simulation to eVTOL aircraft; advanced lifting mechanism requirements for rotor, wing, or body; and other future vertical lift aircraft configurations
• rotocraft simulator fidelity ratings, fidelity metrics, pilot cueing requirements for specific air vehicle configurations or mission tasks, transfer of training, and application of simulation to study pilot-rotocraft interactions
• advanced or novel simulation technologies, including in-flight simulation, parallel computing for real-time simulation, and distributed simulation

Session Chair: Dr. Mike Jones, German Aerospace Center (DLR), +49-531-295-2936, michael.jones@dlr.de
Deputy Session Chair: Todd Smith, Sikorsky Aircraft, a Lockheed Martin Co., 1-561-297-3417, todd.t.smith@lmco.com
OPERATIONS

Papers are invited that address commercial and military rotorcraft operations (manned or unmanned) on the following topics:
- Concepts of Operations (CONOPS)
- extreme weather operations
- public safety, emergency, and medical service operations
- offshore operations
- rotorcraft survivability, vulnerability and operational effectiveness analyses

Session Chair: Daniel Janson, Boeing Company, 1-610-591-3223, daniel.janson@boeing.com
Deputy Session Chair: Jordan Kaye, Sikorsky Aircraft, a Lockheed Martin Co., 1-203-386-3917, jordan.kaye@lmco.com

PRODUCT SUPPORT SYSTEMS

The Product Support committee is calling for technical papers that present the perspective of the air vehicle, power plant, ground support equipment, training device or mission equipment from the manufacturer, maintainer or end user. Some of the reliability, maintainability and supportability considerations in product introduction may be entirely new to the user and/or manufacturer, requiring new and innovative support concepts. Legacy systems also have unique supportability challenges as systems are in service longer. Key product support subjects include:
- designing for reliability and maintainability
- Platform Maintenance Applications (PMA)/other maintenance applications
- development of new repair technologies
- 3-D and augmented reality technical publications
- Performance Based Logistics (PBL)
- Condition Based Maintenance (CBM)
- HUMS-derived automated spares management
- fleet data management & data analytics
- increasing the life of legacy systems
- Contractor Logistics Support (CLS)
- Fleet Information Management (FIM)
- Flight Operations Quality Assurance (FOQA)
- centralized automated flight records systems
- site activation
- pre-operational support planning
- service center support
- training facilities
- lessons learned from deployed operations/pre-production prototyping
- rapid prototyping for legacy out-of-production spares
- auster-fielded support programs.

Session Chair: JinKyu Choi, Sikorsky Aircraft, a Lockheed Martin Co., 1-203-944-3854, jin.choi@lmco.com
Deputy Session Chair: Kevin Rees, U.S. Army Aviation & Missile Research Development & Engineering, 1-361-961-3850, kevin.s.rees.civ@mail.mil

PROPULSION

[Please limit abstract submissions to no more than 2-pages.]

The Propulsion committee invites papers that present new and innovative information on propulsion for rotorcraft and other vertical flight aircraft, including unique propulsion challenges of UAVs, FVL and VSTOL aircraft configurations with variable/multi-speed propulsion concepts. Recommended topics for these configurations include:
- rotorcraft engines
- rotorcraft drive systems
- platform energy requirements
- propulsion system integration
- related airframe/engine technologies

Centered around these topics and of specific interest are papers addressing recent approaches or technologies that:
- enhance safety and improve performance
- provide methods and design analyses that improve engine and drive system reliability
- enable a reduction in customer component-repair/replacement burden

Other recommended topics include:
- system integration considerations
- environmental impacts and requirements
- integrated/advanced electronic control systems (to include sensors)
- advanced materials, gear and bearing technology
- shafting advancements
- alternative fuels and lubricants
- demonstrate the use of simulation to enhance propulsion systems and subsystems
- detail design tools that support the above technologies
- provide creative validation/testing methods aimed at reductions in development/qualification costs
- alternatives to conventional rotorcraft propulsion/drive systems, including hybrid/electric drives, batteries, fuel cells and electric motors and their integration

Session Chair: Rosandra Scheppa, Sikorsky Aircraft, a Lockheed Martin Co., 1-561-775-5319, rosandra.scheppa@gmail.com
Deputy Session Chair: Bruce Jensen, Sikorsky Aircraft, a Lockheed Martin Co., 1-203-381-6486, bruce.w.jensen@lmco.com

SAFETY

Papers are invited addressing technologies and processes for the prevention of vertical lift accidents in both new design and legacy fleet aircraft. Topics of particular interest are:
- application of technology in order to negate the safety critical hazards to commercial, private and military aircraft
- current or emerging technologies to address specific accident cause factors
- system safety engineering processes that identify and mitigate hazards
- safety risk management which proactively improves aircraft safety
- safety risk assessment processes which mitigate accident recurrence
- operational procedures for accident avoidance such as enhanced pilot training
- fleet-wide safety lessons learned from the application of advanced flight/crew monitoring technologies
- current and new accident investigation techniques specifically those techniques which aid in accident investigations when actions in the cockpit are not known
- safety analyses of transformative VTOL design concepts such as autonomous copiloting/piloting and electric/hybrid distributed propulsion systems

Other topics of interest include off aircraft solutions in other areas such as:
- certification
- airspace structure
- management tools
- risk assessment tools and techniques
- simulation and training to include actual accident scenario-based training, and others when particularly related to rotorcraft safety

Session Chair: Gary Braman, Sikorsky Aircraft, a Lockheed Martin Co. 1-256-327-5356, gary.d.braman@lmco.com
Deputy Session Chair: Tony Randall, Bell, 1-817-280-3836, wrandall@bh.com
STRUCTURES & MATERIALS

The Structures and Materials committee invites papers, which address the development, design, analysis, testing, service experiences, or novel application of structures and materials to manned and unmanned rotorcraft, powered lift and fixed-wing V/STOL aircraft. Topics of interest include, but are not limited to the following:

- durability and damage tolerance
- fatigue and fracture mechanics
- impact mechanics
- advanced metallic and composite materials and structures
- probabilistic mechanics and structural reliability methods
- repair concepts and methodology
- structural integrity assurance via health monitoring and non-destructive evaluation and prognosis of remaining useful service life
- stress and finite element modeling and analysis
- structural design criteria, loads development, and optimization
- verification and validation of structural methodologies
- certification of rotorcraft structural parts

In general, related topics on affordability, weight reduction, material and structural qualification, and stress prediction accuracy improvements are desirable. Papers on practical applications of high strain, high durability, or adaptive materials to advanced structural concepts for improved performance or affordability are also solicited.

Session Chair: Katherine “Kit” Fry, U.S. Army Aviation Engineering Directorate, 1-256-313-9025, katherine.a.fry4.civ@mail.mil

Deputy Session Chair: Michael Kiser, U.S. Army Aviation Engineering Directorate, 1-256-313-8423, michael.r.kiser9.civ@mail.mil

SYSTEMS ENGINEERING

The Systems Engineering Tools/Processes technical committee invites papers that will promote the advancement of system design, development, integration and management across specialty areas associated with the engineering of helicopter systems. Papers in this session may include topics that span several other helicopter technical subject areas and address problems unique to trade-offs and optimization across those areas. Topics of interest include but are not limited to the following:

- new tools and methods (model based systems engineering, etc.) to perform requirements development and management
- system architecture, especially at the system-of-systems level
- system modeling and simulation
- system verification and validation
- systems reliability
- system qualification and certification
- program/project management for system-of-systems
- risk management
- systems engineering tools, processes and best practice
- systems engineering quality management
- systems engineering education and training;
- "systems thinking" benefit
- systems reliability
- system qualification and certification

Session Chair: Serge Germanetti, AIRBUS, +1-33-442-857-019, serge.germanetti@airbus.com

Deputy Session Chair: James Garman, Sikorsky Aircraft, a Lockheed Martin Co., 1-203-386-5510, jim.garman@lmco.com

TEST & EVALUATION

[Abstracts exceeding the 5-page limit will not be evaluated.]

Papers are invited addressing all aspects of legacy and future VTOL aircraft test and evaluation. This includes the evaluation of advanced technologies (components and subsystems) and vehicles (manned and unmanned) in laboratory, ground, and flight-test scenarios. Insightful papers illustrating the applied methodology for testing of advanced technologies and vehicles are highly desirable. The status, including milestones, of any pending research/work required for the completion of the paper should be included. The extended abstracts will be evaluated based on the appropriateness of the work to the vertical flight industry, originality, technical quality, availability of (preliminary) results and completion status. The Committee strongly encourages papers covering:

- research agency, industrial, academic and military activities performed in representative operational and environmental conditions
- aspects of the complex flight envelopes of conventional and unconventional vertical lift vehicles (low-speed, transition, maneuvering, conversion, and high-speed)
- testing techniques involving vehicle safety in aspects of technological design, scientific evaluation, event investigation, and airworthiness compliance.

Session Chair: Joost Hakkaart, Netherlands Aerospace Centre (NLR), +1-31-88511-3452, joost.hakkaart@nlr.nl

Deputy Session Chair: Berend van der Wall, German Aerospace Research Center (DLR), +1-49-531-295-2849, berend.vanderwall@dlr.de

UNMANNED VTOL AIRCRAFT & Rotorcraft

- autonomy, collaboration and architectures
- reliability and robustness
- payloads and sensors, including applications such as Intelligence, Surveillance and Reconnaissance (ISR), weaponization, cargo, etc.
- agility and performance
- survivability
- operability

Other topics of interest include, but are not limited to the following:

- guidance, navigation and control
- alternate navigation methods
- design concepts, including small unmanned aircraft systems (SUAS) and micro air vehicles (MAVs)
- mechatronics integration
- reasoning, decision-making, autonomy and multivehicle collaboration architectures
- embedded perception and data/information fusion
- autonomous operation, tasking and control (C4)
- manned-unmanned (MUM) teaming
- flight testing, modeling and simulation
- data links and communications
- airworthiness, safety and certification, operation in civil airspace
- international cooperation and compatibility

Session Chair: Dr. Vikram Hrishikeshavan, University of Maryland, 1-240-383-8379, vikramh@umd.edu

Deputy Session Chair: Dr. Jack Langelaan, Pennsylvania State University, 1-814-863-6817, jlangelaan@psu.edu

IMPORTANT DATES

- Monday, October 15, 2018 – abstracts must be submitted to Mira website.
- Mid-November 2018 – VFS expects to notify authors of paper selection.
- Monday, April 1, 2019 – final papers must be submitted to Mira website.

www.vtol.org/mira
